System Administrator / IT Operation

Maintaining and ensuring the reliable performance of an organization’s IT systems and infrastructure. Tasks: Data decommissioning, server management, network security, software updates, and troubleshooting technical issues. Operations-focused: Oversee workflows, coordinate teams, and ensure that processes run efficiently to meet business goals. Critical in minimizing downtime, protecting data, and keeping daily operations running smoothly

NSTCO	Providence RI Area / Land O Lakes FL	02/2019-12/2025
Project Management / Teacher / Network Support / Freelance / Web Developer		
Lead teams to successfully complete projects on time while managing budgets, project scope, and funding to support overall business goals. As a Technology Teacher with Pasco County Schools, I develop technical skills and guide students in modern IT practices. I optimize IT networks to ensure efficient workflows, handling troubleshooting, system installations, and upgrades while collaborating with both internal teams and external clients. I also design and develop websites using a wide range of tools and technologies, covering both front-end and back-end development, with a strong focus on user experience and functionality.		
Senior System Administrator	Tampa FL	01/2023-09/2023
Blackstone Medical Services		
Proactively managing and maintaining servers, networks, firewalls, and related hardware and software to ensure optimal performance and reliability. Administer and support core technologies such as Microsoft, Cisco, Citrix, and VMware, while keeping technical documentation organized and up to date. Providing after-hours support for infrastructure issues, assisting with vendor evaluations and negotiations, and contributing to system upgrades and maintenance. Mentor team members, manage user access, and collaborate with staff and customers to support technical operations and continuous improvement.		
System Administrator	East Providence RI	09/2019-11/2022
Mega Transportation Group		
Proactive response to unforeseen issues such as IT downtime and zero-day exploits while maintaining strong system security and continuity. Managing user accounts, permissions, storage, and Active Directory, along with installing, configuring, and maintaining hardware, software, and network systems. The position supports multiple companies under Mega Transportation Group, overseeing system performance, troubleshooting outages, and enforcing security measures like backups and firewalls. Additionally, serving as an IT/Software Project Manager for Predicata, leading projects, coordinating vendors, and managing contracts, negotiations, and technical deliverables, Atlassian / Jira, Agile /Scrum		
ASC Engineer III Lead-Trainer	West Warwick RI	01/2013-06/2018
Cox Communications		
Leading and training teams in advanced data, telephony, video, and networking systems while supporting new deployments, developing procedures, and contributing to system design and engineering. Emphasizes continuous personal growth to strengthen IT expertise and interpersonal skills, alongside monitoring network elements and performing remote diagnostics. As a Technical Support Lead, the position focuses on supervising, coaching, and developing a diverse team to deliver strong customer service, meet performance goals, and drive revenue through effective problem-solving and cross-selling. The work is fast-paced and detail-critical, requiring strong leadership, communication, collaboration, and accountability to ensure high-quality results and positive customer experiences.
